

907 bulk large B cell lymphoma (LBCL) transcriptomes

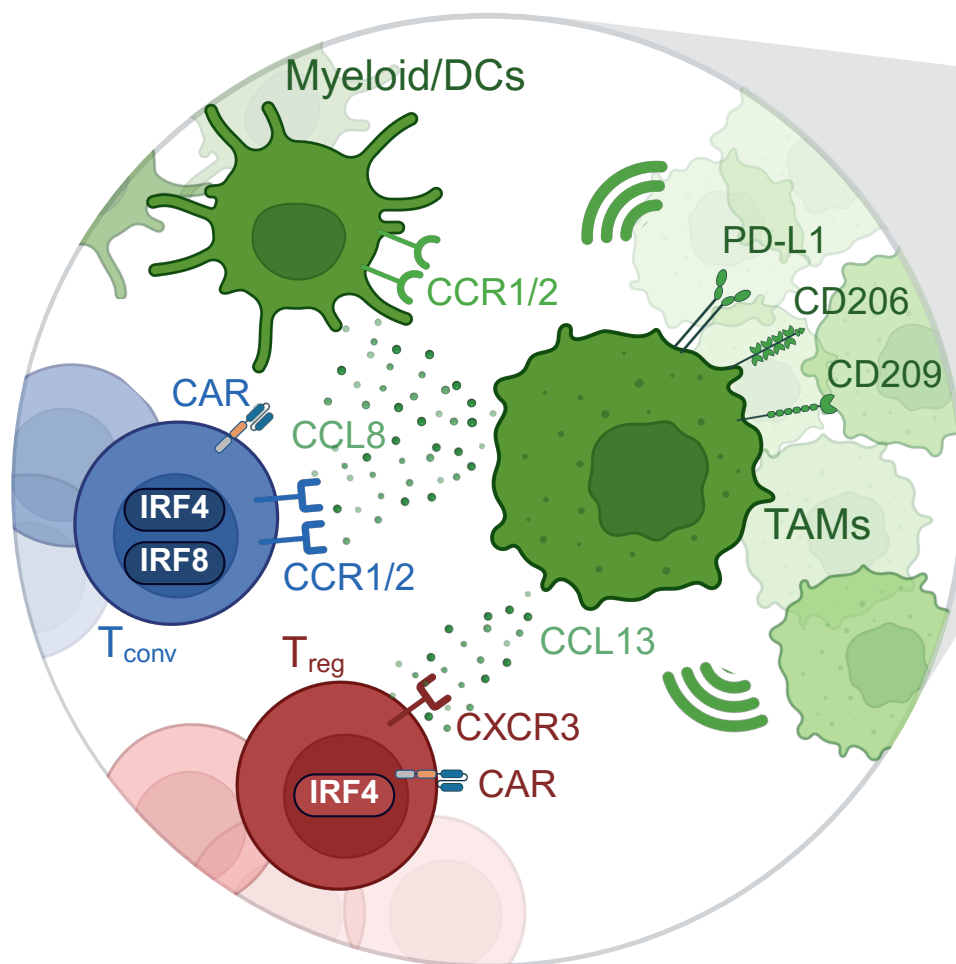

23,670 single cells from 18 on-treatment CAR T TME samples

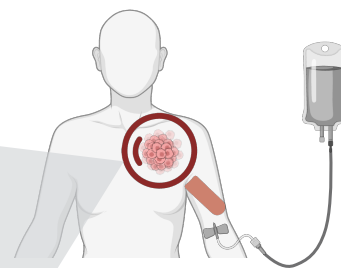

15,935 single cells from 4 baseline LBCL samples

Discovery and validation of the CAR T tumor microenvironment

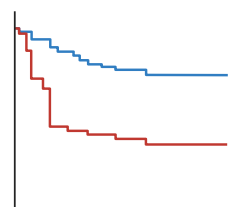

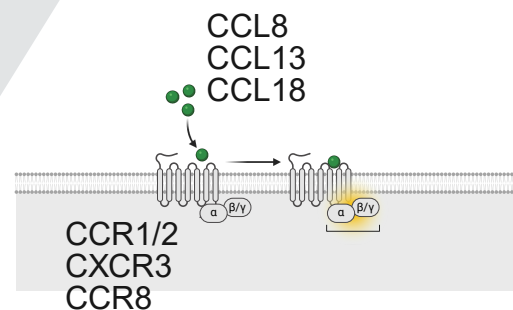

## The CAR T TME of LBCL

18 LBCL patients receiving CD19-CAR or bispecific CD19/CD22-CAR therapy

Cell-cell interactomes identify ligand-receptor pairs in the post-CAR TME

Overexpression leads to poor outcomes after (R)-CHOP and CAR T therapies
